SUMMARY

- Software Developer and former **Team Leader in Unit 8200**, with hands-on experience designing, building, and owning complex software systems from design to production with .NET, C#, TypeScript and RESTful APIs.
- Strong foundation in distributed systems, async processing, and a commitment to code quality through unit/integration testing. A fast learner with a passion for modern software architecture and collaborative environments.

TECH STACK

Languages: C#, JavaScript, TypeScript, Python, SQL	Backend: ASP.NET Core, RESTful services, async programming	Web & Frontend: REACT, HTML5, CSS3
Messaging: RabbitMQ, Kafka	Programming Principles: OOP, Design Patterns	Cloud & Platforms: GCP, Supabase, Railway
DevOps: Docker, Docker Compose, Git		

PROJECTS

- SQL Detective - Client-Server Software System (C#, .NET)** 
- Designed and implemented a client-server application in C#, integrating RESTful APIs and cloud-based services for session management, data synchronization, and external system communication.
 - Built scalable, cloud-ready backend services with clear separation of concerns, supporting business workflows and seamless integration with frontend components.
 - Source code available on GitHub: [Client](#)  | [Backend](#) 
- Leads Management - Full-Stack Project (React, TypeScript, Python, PostgreSQL)** 
- Implemented a backend routing system in C# and Python for assigning leads based on business rules, availability, and dynamic constraints, exposing REST APIs for integration with external services.
 - Developed a responsive client-side application using React, TypeScript, HTML, and CSS, building forms, data views, and API integrations to support end-to-end business workflows in a cloud-based environment.
 - Source code available on GitHub: [Backend](#)  | [Frontend](#) 
- Event-Driven Data Platform (C#, .NET, RabbitMQ, Kafka, Docker)** 
- Designed and implemented an event-driven backend system using RabbitMQ and Kafka, building scalable, asynchronous services to support reliable business workflows in a cloud-ready environment.
 - Source code available on [GitHub](#) 

PROFESSIONAL EXPERIENCE

- Data Team Lead (Analytics & Automation), Unit 8200** 2017 – 2020
- Led a team in the end-to-end design and deployment of mission-critical backend tools and high-scale analytical systems.
 - Developed Python-based data services, supporting real-time operations under high-pressure constraints.
 - Delivered a **significant increase** in intelligence output for national-scale missions by optimizing data processing pipelines and search algorithms.
- Data Analyst, Maccabi Health Care Services** 2021 – 2022
- Built automated Python-based data pipelines using SQL, improving data quality and availability, and enabling KPI tracking for operational and managerial decision-making.
 - Designed dashboards and data workflows and integrations adopted by senior leadership and the Ministry of Health.

EDUCATION

- Bachelor's degree in computer science,** 2022 – 2025
The Academic College of Tel-Aviv, Yaffo
- Relevant Coursework: Data Structures, Algorithms, C#, Event-Driven Architecture, Design Patterns, Machine Learning.
